

Stressless®

BATICK

Simple cleaning, excellent utilization properties and a favorable price.

Batick is a corrected grain, pigment improved and grain embossed upholstery leather, which has had most of its natural marks removed. Batick is resistant to fading, although changes in colour will occur over time due to use and exposure to light. A protective layer of lacquer simplifies cleaning. Simple cleaning, excellent utilization properties and a favorable price make Batick a safe choice.

Maintenance and cleaning

Vacuum the furniture regularly and wipe the surface with a damp cloth as needed. Remove spills immediately. If stains and dirt cannot be removed readily with a damp cloth, a cleaning agent from the Stressless® Leather Care Kit may be used.

We recommend that your leather furniture is cleaned and re-protected at least every six months with Stressless® Leather Care products.

Important to know about leather furniture

The leather for our furniture is a natural material that comes from cattle hides. One characteristic of hide is that it is marked by nature, vegetation, and the care the animal has been subjected to. Each hide is unique in its structure, appearance, nuances and size. Ekornes may use several hides when making your furniture. This, together with the leather's play of colours and natural marks, makes each piece of furniture unique. In time, the leather will age and develop a patina. Although leather furniture can withstand a lot of wear and tear, its appearance will change over the years.
